

Digging for Fossils

At Ghost Ranch, New Mexico, scientists have found over 1,000 coelophysis dinosaur fossils – and they think there are thousands more! Creation scientists believe that these dinosaurs were drowned in Noah’s flood, then buried by tons of mud and sediment called the Chinle (shin-lee) Formation.

There are twelve coelophysis buried in rock strata and sediment in the Chinle Formation below. Can you find and circle all twelve?
